

STATEMENT OF DEFICIENCIES AND PLAN OF CORRECTION	(X1) PROVIDER / SUPPLIER / CLIA IDENTIFICATION NUMBER 395232	(X2) MULTIPLE CONSTRUCTION A. BUILDING _____ B. WING _____	(X3) DATE SURVEY COMPLETED 07/23/2020
NAME OF PROVIDER OF SUPPLIER HOSPITALITY CARE CENTER OF HER		STREET ADDRESS, CITY, STATE, ZIP 3726 EAST STATE STREET HERMITAGE, PA 16148	
For information on the nursing home's plan to correct this deficiency, please contact the nursing home or the state survey agency.			
(X4) ID PREFIX TAG	SUMMARY STATEMENT OF DEFICIENCIES (EACH DEFICIENCY MUST BE PRECEDED BY FULL REGULATORY OR LSC IDENTIFYING INFORMATION)		
F 0880 Level of harm - Minimal harm or potential for actual harm Residents Affected - Some	<p>Provide and implement an infection prevention and control program.</p> <p>**NOTE- TERMS IN BRACKETS HAVE BEEN EDITED TO PROTECT CONFIDENTIALITY**</p> <p>Based on observations, review of Centers for Disease Control (CDC) and Department of Health (DOH) recommendations and facility documentation, and staff interview, it was determined that the facility failed to follow guidance regarding the provision of alcohol based hand rub (ABHR) as the recommended hand hygiene method in place of hand washing for 21 of 21 dispensers throughout the facility. Findings include: CDC guidance identified the following: Hand hygiene is an important part of the United States response to the international emergence of COVID-19. [MEDICATION NAME] hand hygiene, which includes the use of ABHR or handwashing, is a simple yet effective way to prevent the spread of pathogens. If soap and water are not readily available, use a hand sanitizer that contains at least 60% alcohol. There is not a recommended alternative to hand rub products with greater than 60% [MEDICATION NAME] or 70% [MEDICATION NAME] as active ingredients.</p> <p>The CDC also identified that available evidence indicated [MEDICATION NAME] chloride has less reliable activity against certain bacteria [MEDICAL CONDITION] than either of the alcohols. DOH promotes the use of ABHR as the alternative to hand washing and that dispensers should be widely available and easily accessible at the points of care. Observations on 7/13/20, between 9:10 a.m. and 11:30 a.m. included: Various staff utilizing the room and corridor hand sanitizer dispensers to sanitize their hands. A staff person was assisting a resident into the building and had used the corridor dispenser. A housekeeper exited a resident room and utilized the sanitizer dispensers as they exited the room. During interview with the Nursing Home Administrator (NHA) regarding the hand sanitizer in the dispensers during the observations, it was discovered that an alternative product, [MEDICATION NAME] chloride, provided by a sanitizer product company was contained in the dispensers. The Safety Data Sheet for the facility sanitizer revealed that the [MEDICATION NAME] chloride hand sanitizer did not contain the recommended active ingredients of [MEDICATION NAME] or [MEDICATION NAME]. During an interview on 7/13/20, at 10:45 a.m. the NHA confirmed that the hand hygiene wall dispensers used by staff and visitors did not contain an alcohol based hand sanitizer. 42 CFR 483.80 Previously cited 5/23/19, 6/29/18 28 Pa.
