

STATEMENT OF DEFICIENCIES AND PLAN OF CORRECTION	(X1) PROVIDER / SUPPLIER / CLIA IDENTIFICATION NUMBER 425168	(X2) MULTIPLE CONSTRUCTION A. BUILDING _____ B. WING _____	(X3) DATE SURVEY COMPLETED 06/17/2020
NAME OF PROVIDER OF SUPPLIER CARLYLE SENIOR CARE OF FOUNTAIN INN		STREET ADDRESS, CITY, STATE, ZIP 501 GULLIVER ST FOUNTAIN INN, SC 29644	
For information on the nursing home's plan to correct this deficiency, please contact the nursing home or the state survey agency.			
(X4) ID PREFIX TAG	SUMMARY STATEMENT OF DEFICIENCIES (EACH DEFICIENCY MUST BE PRECEDED BY FULL REGULATORY OR LSC IDENTIFYING INFORMATION)		
F 0880 Level of harm - Minimal harm or potential for actual harm Residents Affected - Many	<p>Provide and implement an infection prevention and control program. **NOTE- TERMS IN BRACKETS HAVE BEEN EDITED TO PROTECT CONFIDENTIALITY** Based on observation, interviews and record review, the facility failed to disinfect meal delivery carts with an EPA-registered (Environmental Protection Agency) disinfectant after meal services. There were five meal delivery carts. This deficient practice occurred during the COVID-19 pandemic. The findings included: During an observation on 06/17/2020 at 1:55 PM, two meal delivery carts were observed by the kitchen entry door, with used meal trays from the lunch meal service. During an interview on 06/15/2020 at 1:00 PM, the Certified Dietary Manager was asked about the current practices for cleaning and disinfecting the meal delivery carts. S/he stated the dietary staff don personal protective equipment and remove the dirty trays from the carts. They then clean the carts with an Ecolab cleaner. S/he did not know the cleaning agent that was currently being utilized. The type of cleaning agent and manufacturer's specifics were requested. A review of the Ecolab Safety Data Sheet indicated the product was Oasis 146 Multi-Quat Sanitizer, which contained n-alkyl [MEDICATION NAME] ammonium chloride 3%, Octyl decyl [MEDICATION NAME] ammonium chloride 2.25%, [MEDICATION NAME] 1-5%, Didecyl [MEDICATION NAME] Ammonium Chloride 1.35% and [MEDICATION NAME] ammonium chloride 0.9%. This was the concentration as sold, and undiluted. During an interview on 06/17/2020 at 3:15 PM, the Administrator verified they use Ecolab Oasis 146 Multi-Quat Sanitizer for cleaning the meal carts when they are returned to the kitchen from meal service. Upon request, she reviewed the EPA website, and stated the Oasis 146 was not a cleaner that was on the EPA-registered list as effective against COVID-19. S/he further stated they would only switch to the different cleaner if they had COVID-19 positive residents in the facility. However, during the survey it was observed that other cleaners in the facility had already been changed to EPA-registered disinfectants effective to kill COVID-19, such as the agents being used by housekeeping. The Administrator indicated there were 9 residents who were on a 14-day quarantine, who had been exposed to an employee who tested positive for COVID-19. These residents were receiving normal dinnerware, and not served on paper products. Their meal trays would have been taken from their room and placed back on the meal delivery carts. During an interview on 06/17/2020 at 3:55 PM, Dietary Staff #1 was asked about the process for cleaning the meal delivery carts after meal services. S/he stated the carts were brought into the dishwashing area and s/he would apply a face shield, apron and gloves. S/he would spray down the carts with water, then spray the carts with the Oasis 146 sanitizer. During an interview on 06/17/2020 at 4:00 PM, the Administrator, in the presence of the CDM, stated their policy was to first wash the carts with soap and water, then spray them with Oasis 146. During an interview on 06/17/2020 at 3:45 PM, the facility's Ecolab representative indicated the Oasis 146 was a sanitizer and not a disinfectant. S/he stated a sanitizer and a disinfectant were not the same, and only a disinfectant would be effective to kill COVID-19. S/he indicated some of his other long-term care clients had already made the switch to a disinfectant to clean the meal delivery carts. A review of the Centers for Disease Control (CDC) guidelines titled, Preparing for COVID-19 in Nursing Homes, last updated 05/19/2020, indicated, Environmental Cleaning and Disinfection: - Develop a schedule for regular cleaning and disinfection of shared equipment, frequently touched surfaces in resident rooms and common areas; - Ensure EPA-registered, hospital-grade disinfectants are available to allow for frequent cleaning of high-touch surfaces and shared resident care equipment. - Use an EPA-registered disinfectant from List N on the EPA website to disinfect surfaces that might be contaminated with [DIAGNOSES REDACTED]-CoV-2 (COVID-19). Ensure HCP (health care personnel) are appropriately trained on its use.</p>
