

STATEMENT OF DEFICIENCIES AND PLAN OF CORRECTION	(X1) PROVIDER / SUPPLIER / CLIA IDENTIFICATION NUMBER <b>365084</b>	(X2) MULTIPLE CONSTRUCTION A. BUILDING _____ B. WING _____	(X3) DATE SURVEY COMPLETED <b>08/11/2020</b>
NAME OF PROVIDER OF SUPPLIER <b>PLEASANTVIEW CARE CENTER</b>		STREET ADDRESS, CITY, STATE, ZIP <b>7377 RIDGE RD PARMA, OH 44129</b>	
For information on the nursing home's plan to correct this deficiency, please contact the nursing home or the state survey agency.			
(X4) ID PREFIX TAG	SUMMARY STATEMENT OF DEFICIENCIES (EACH DEFICIENCY MUST BE PRECEDED BY FULL REGULATORY OR LSC IDENTIFYING INFORMATION)		
F 0880  <b>Level of harm - Minimal harm or potential for actual harm</b>  <b>Residents Affected - Some</b>	<b>Provide and implement an infection prevention and control program.</b>  Based on interview and the Center for Disease Control Recommended Guidance for Extended Use and Limited Reuse of N95 Filtering Facepiece Respirators in Healthcare Settings dated 03/27/20 the facility failed to ensure staff properly stored N95 masks prior to re-use in the facility. This had the potential to affect 95 residents who did not reside on the Covid positive unit. The census was 128 residents. Findings include: An interview with Registered Nurse (RN) #130 on 08/11/20 at 9:20 A.M. indicated she was educated on the storage of the N95 respirator type mask between uses. RN #130 indicated at the end of her shift she placed the used N95 mask in a paper bag and then placed the paper bag with the N95 used respirator mask in a grocery type plastic bag to carry out of the facility. RN #130 indicated prior to entering the building on her next scheduled working day she donned the N95 respirator type mask before entering the building at the start of her eight hour shift. RN #130 did not work in the Covid positive unit; the Covid positive unit had dedicated staff. An interview with State tested Nursing Assistant (STNA) #131 on 08/11/20 at 9:25 A.M. indicated he was educated on the storage of the N95 respirator type mask between uses. STNA #131 stated he placed his used N95 respirator mask in a paper bag and then sealed the paper bag with the used N95 respirator type mask in a sealed Ziploc bag at the end of his shift and carried the sealed Ziploc bag out of the facility to store until his next shift. STNA #131 indicated he re-used the N95 mask during his next scheduled shift in the facility. STNA #131 did not work in the Covid positive unit. An interview with the Infection Control Preventionist (ICP) on 08/11/20 at 10:00 A.M. indicated she was aware the staff were using the paper bags provided by the facility to store their N95 respirator mask. ICP indicated the staff could take their used N95 respirator type mask in the paper bag out of the facility to store in their car or other area until their next scheduled shift. The Center for Disease Control (CDC) Recommended Guidance for Extended Use and Limited Reuse of N95 Filtering Facepiece Respirators in Healthcare Settings dated 03/27/20 indicated guidance for re-use of the N95 respirator type filtering mask. The recommendation indicated there is no way of determining the maximum possible number of safe reuses for an N95 respirator as a generic number to be applied in all cases. Safe N95 reuse is affected by a number of variables that impact respirator function and contamination over time. However, manufacturers of N95 respirators may have specific guidance regarding reuse of their product. The recommendations are designed to provide practical advice so that N95 respirators are discarded before they become a significant risk for contact transmission or their functionality is reduced. The recommendation included to hang used respirators in a designated storage area or keep them in a clean, breathable container such as a paper bag between uses. To minimize potential cross-contamination, store respirators so that they do not touch each other and the person using the respirator is clearly identified. Storage containers should be disposed of or cleaned regularly. The facility policy and procedure titled COVID 19 Crisis Strategies for Face Mask Quick Guide Per CDC Guidelines dated 03/18/20 did not give clear guidance to the staff to determine if the paper bag and N95 mask could be stored outside the facility or in a plastic bag prior to the re-use of the N95 mask. The guidance indicated for extended use of face masks for multiple resident encounters without removal will be utilized during crisis times. The guidance included when removing the face mask, carefully fold so that the outer surfaces are touching to reduce contact with the storage container. Face masks should be stored in a paper bag or breathable container labeled with the staff name and stored in a non-resident area.		
LABORATORY DIRECTOR'S OR PROVIDER/SUPPLIER REPRESENTATIVE'S SIGNATURE		TITLE	(X6) DATE

Any deficiency statement ending with an asterisk (\*) denotes a deficiency which the institution may be excused from correcting providing it is determined that other safeguards provide sufficient protection to the patients. (See instructions.) Except for nursing homes, the findings stated above are disclosable 90 days following the date of survey whether or not a plan of correction is provided. For nursing homes, the above findings and plans of correction are disclosable 14 days following the date these documents are made available to the facility. If deficiencies are cited, an approved plan of correction is requisite to continued program participation.
